Technical Overview

Results-oriented Full Stack Developer with over 2 years of experience specializing in Dot Net, Java, Spring Boot, and ASP.NET Core, currently expanding into AI with hands-on contract work in Prompt Engineering and Context Prompting.

Featured Projects

1. Vachan Study Chat

- **Live URL**: vachan-study-chat-snpm.vercel.app (https://vachan-study-chat-snpm.vercel.app/)
- **Technologies**: Next.js, React, Vercel
- **Description**: A web application designed to facilitate study chats and discussions. Built with a modern Next.js architecture and deployed seamlessly via Vercel for high performance and reliability.

2. Gundert Translation Editor

- **Live URL**: gundert-translation-editor-rosy.vercel.app (https://gundert-translation-editor-rosy.vercel.app/)
- **Technologies**: Next.js, React, Vercel
- **Description**: A specialized translation editing interface aimed at streamlining translation workflows. Features a responsive UI and fast data rendering for optimal user experience.

3. Python Scriptures

- **Technologies**: Python
- **Description**: A dedicated repository for Python-based scripts and data processing tasks, highlighting backend proficiency and scripting capabilities.

4. Dynamic GitHub Portfolio

- **Live URL**: protfolio-seff.vercel.app (https://protfolio-seff.vercel.app/)
- **Technologies**: Next.js (App Router), Tailwind CSS, GitHub REST & GraphQL APIs
- **Description**: An automated, dynamic portfolio that fetches and showcases GitHub repositories, recent commit activity, and Vercel deployment statuses in real-time, utilizing aggressive Next.js server-side caching to respect API rate limits.

Compiled dynamically via automated project summary generation.
